PRESENTATION

I am a final-year robotics master's student at EPFL (Switzerland), seeking internships in computer science. My interests include automation, computer vision and deep learning. I am passionate about engineering, as evidenced by my involvement with the EPFL racing team ([developing a student electric racing car](#)) and academic projects ([microgrids control](#)).

EDUCATION

EPFL – Master in robotics (still ongoing)

Mobile robotics specialty

EPFL – Bachelor in microengineering (2022) {grade = 5.35/6}

3rd year exchange at Polytechnique Montréal in Canada {grade = 4/4}

French baccalaureate (2019) {grade = 17/20}

Scientific specialty

TECHNICAL SKILLS

Proficient in many programming languages

Matlab, Python, SQL, C++

High interest in computer vision and deep learning

- Actual courses in deep learning and computer vision.
- Project in trajectory prediction for an autonomous vehicle.
(knowledge of [TensorFlow](#) and [Pytorch](#))

Solid grounding in control theory and estimation methods

Realization of a Mixed Kalman Filter (MKF) on a student electrical racing car for traction control.

PROFESSIONAL EXPERIENCES

Member of the [EPFL racing team](#) (2022-2023)

My first main experience outside courses in team working to build a student racing car. The communication and coordination were the main aspects of this experience.

Numerous roles as an assistant in mathematics and physics courses (2021 – now)

I learnt about pedagogy and needed to be well organised to manage the exercises preparation.

Various summer jobs
